About me

I'm a final-year ICT student at Fontys specialising in embedded systems with 4+ years of industry experience through internships, work, and independent projects. I have a strong Linux background with an active interest in cyber security.

Experience

September 2026 - February 2027

Power 2 Power

- Developed a simulation of an electrolyzer as well as a P&ID interactive diagram
- Integrated it into an e-methane reactor project

C++ | Modbus | OPC UA

February 2026 - July 2026

RoboCup@Home

- Integrated a robotic arm with a moving base for household tasks
- Implemented pressure sensitive grasping

ROS | MoveIt | C++ | Python

February 2025 - July 2025

DAF

- Worked on a project collaborating with DAF on using electrical vehicles as batteries to store energy from solar panels
- Developed a user-friendly system to schedule charging with Flutter and Go

Go | Flutter | MQTT | Rasberry PI

September 2024 - February 2025

ASML

- Created an internal code analysis tool with an interactive visualizer from scratch
- Participated in early prototype of automatic AI system for documentation generation

C++ | JS | Linux

January 2022 - May 2026

Latin is Simple

Developed a latin vocabulary and grammar trainer with advanced deterministically generated questions

TS | React | Bootstrap | Jest

July 2021 - October 2021

A1 Telecom Austria Group

My first entry in the software industry as a junior intern in the "ICT Projects and Software Development Services Team"

React | Express | GraphQL | Docker

Expertise

Embedded Systems

Developed systems using microcontrollers, sensors and actuators and prototyped PCBs and Linux integration. I recently completed a pre-master program with electrical engineering courses for an embedded systems master.

C/C++ | Arduino | Rasberry PI | KiCAD | MQTT | Modbus

Software Development

Knowledgeable in various fields from system architecture to low-level programming in multiple languages with attention to best practices and standards

Go | Rust | Python | Docker

Linux

Extensive experience using Linux for both personal and professional projects including system configuration, troubleshooting, custom drivers and scripting.

Arch | NixOS | Ubuntu | Fedora | Kali

Cybersecurity

Gained practical experience through Hack The Box and competitions such as Mine the Matrix and TrojanCTF. Additionally developed a few challenges myself for the latter CTF.

Wireshark | nmap | Network protocols

Teaching

Regularly taught students programming in various fields, such as OOP, SOLID principles, circuits, etc. I was invited to host mentoring lectures for Zelinsoft on professional programming.

Education

Technical University of Eindhoven

Embedded Systems

February 2027 - February 2029

Master

- I was accepted for a master, which is yet to start

Sep 2025 - February 2026

Pre-master

- Circuits, systems engineering, mathematics

Sep 2022 - present

Fontys University of Applied Sciences

ICT Bachelor

- High-Tech Embedded Systems (advanced)
- Accelerated Software (Academic Preparation)
- Open Learning

Sep 2020 - Present

Certificates, books, platforms...

As a self-taught programmer I have listed some of the crucial sources/achievements in my portfolio

Sep 2017 - May 2022

Second English Language High School "Thomas Jefferson"

- English, German, Mathematics and IT

Volunteering

February 2025 - November 2025

Glow

Contributed to two student teams for one of the biggest light festivals in the Netherlands:

- Echoes of Tomorrow - prototyping and design
- Phoenix - construction and spotlights programming

C | Python | Arduino

Sustainable Development Goals Challenge

April 2025 - June 2025

Solarwatt

- Co-developed a transparency education platform for a solar panel leader in Germany and the Netherlands

April 2024 - June 2024

SABIC

- Made a game style recycling system with a hardware prototype for the second largest plastic producer in the

C++ | Arduino | TS | React
